Foreword

- (i) This document supersedes the Dangerous Goods Emergency Action Code List 2005.
- (ii) Duty holders are required to use this document for the application of the appropriate Emergency Action Codes (EACs) under Schedule 7 of the Carriage of Dangerous Goods and Use of Transportable Pressure Equipment Regulations 2007 (CDG 2007). These regulations implement the Regulations Concerning the International Carriage of Dangerous Goods by Rail (RID ¹), and the European Agreement Concerning the International Carriage of Dangerous Goods by Road (ADR ²).
- (iii) The assignment of emergency action codes and additional personal protection codes at Section 4 of this document is based upon the physical and chemical properties of the particular dangerous goods.
- (iv) This document is effective from 1 July 2007 and the Emergency Action Code List 2005 should no longer be used from that date.
- (v) Sections 4 and 5 of this Document will continue to be revised in line with any changes made to the RID and ADR Agreements (normally every two years), as provided for in domestic regulations.

¹ Règlements Internationales Relatif au Transport des Marchandises Dangereuses par Chemin de Fer

Section 1 – Introduction to the Emergency Action Codes

1.1 Introduction

- 1.1.1** Emergency Action codes (EACs), also known as Hazchem codes, are for the use of the emergency services in conjunction with Emergency Action Code Cards. EACs indicate to the emergency services actions that may be necessary, during the first few minutes of an incident involving dangerous goods, should the officer in charge of the incident deem it necessary to take immediate actions.
- 1.1.2** This document shall not be used for the purposes of markings on the orange coloured plate without reference to the Carriage of Dangerous Goods and Use of Transportable Pressure Equipment Regulations 2007 (CDG 2007). The fact that a United Nations (UN) number and emergency action code (EAC) for a given substance are shown in this document does not necessarily mean they should be used for the marking of road tankers, rail tank wagons or tank containers used for the carriage of that substance. An annotation (1) in the EAC column of Section 4 indicates that it is not applicable to the carriage of dangerous goods under RID or ADR.
- 1.1.3** This document contains all items listed by the United Nations in their publication “Recommendations on the Transport of Dangerous Goods Model Regulations (fourteenth revised edition)” with the exception of substances in UN Class 1, i.e. explosives. EACs are not allocated to UN Class 7 substances, i.e. radioactive material and these are annotated (2) in the EAC column of Section 4 of this document.
- 1.1.4** For internal transport operations in Great Britain there are two forms of placarding/plate marking permitted for tank transport and carriage in bulk under CDG 2007. Both of these include the hazard warning diamond and the UN number. Road and Rail vehicles must also display one of two additional identification numbers.
- GB registered road and rail vehicles on domestic journeys must display the Emergency Action (Hazchem) Code
 - All other vehicles must display the Hazard Identification Number (HIN) (see paragraphs 4.1.13–4.1.18).

- 1.1.5** Examples of these two systems are shown below. The requirements are contained in Regulation 53 (HIN) and 91 and Schedule 7 (EAC) of CDG 2007.

Hazard Warning Panel

RID/ADR (Hazard Identification Number) orange coloured plate and placard

1.2 Danger Labels

- 1.2.1** The following are danger labels that will be shown during the transport of dangerous goods:

CLASS 1 – Explosive substances or articles

Divisions 1.1, 1.2
and 1.3

Division 1.4

Division 1.5

Division 1.6

CLASS 2 – Gases

Flammable gases

Non-flammable,
non-toxic gases

Toxic gases

CLASS 3 – Flammable liquids

CLASS 4.1 – Flammable solids, self-reactive substances and desensitized explosives

CLASS 4.2 – Substances liable to spontaneous combustion

CLASS 4.3 – Substances which, in contact with water, emit flammable gases

CLASS 5.1 – Oxidising substances

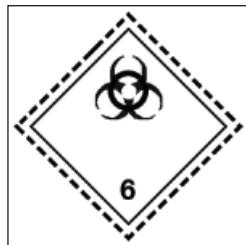

CLASS 5.2 – Organic peroxides

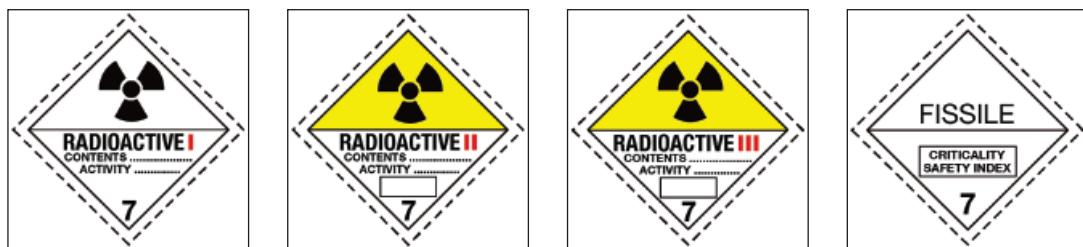

CLASS 6.1 – Toxic substances

CLASS 6.2 – Infectious substances

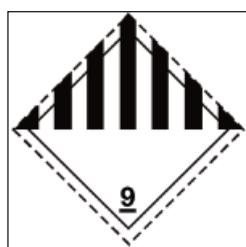

CLASS 7 – Radioactive material

CLASS 8 – Corrosive substance

CLASS 9 – Miscellaneous dangerous substances and articles

Section 2 – Displaying Emergency Action Codes

2.1 Assigning Emergency Action Codes

- 2.1.1 The codes allocated and shown in the list apply to tank transport and carriage in bulk of the single substance by road or rail except where it is also annotated (1). These codes will not necessarily apply for non-transport incidents although they may be used to provide some indication of the action that may be necessary.
- 2.1.2 Substances in Class 7, i.e. radioactive material, have not been allocated emergency action codes and are annotated (2).
- 2.1.3 The prefix ‘●’ will sometimes appear before the EAC in the third column, e.g. UN 1193 Ethyl Methyl Ketone appears as ●2YE. The ‘●’ here indicates to the emergency services that alcohol resistant foam is the preferred firefighting medium but this prefix **shall not** be displayed on plates, i.e. EACs displayed on road or rail vehicles will either be two characters without an ‘E’ or three characters including an ‘E’. In a similar way an APP code will sometimes appear in the 4th column of the List at Section 4 indicating additional information for the emergency services but again this **shall not** be displayed on plates.
- 2.1.4 In some cases, where there is more than one EAC for a single UN number, it will be necessary to determine the EAC by reference to the packing group, e.g. for UN 1224 – the EAC will be 3YE for ketones of packing group II whereas the EAC will be 3Y for ketones of packing group III. In these cases the relevant packing groups will be identified in the ‘Substance’ column.

2.2 Assigning Emergency Action Codes to multi-loads

- 2.2.1 The following procedure shall be used to assign EACs when each of the dangerous goods comprising the multi-load is listed for carriage in a tank under RID or ADR.
 - 1st character of the code**
 - 2.2.2 The number forming the first character of the code for a multi-load is the highest of the numbers occurring in the EACs for the individual dangerous goods.

2nd Character of the code

- 2.2.3** The letter forming the second character of the code shall be determined from the first letter of the EAC for each of the dangerous goods from the chart below.

Code chart for determination of emergency action codes for multi-loads

	P	R	S	T	W	X	Y	Z
P	P	P	P	P	W	W	W	W
R	P	R	P	R	W	X	W	X
S	P	P	S	S	W	W	Y	Y
T	P	R	S	T	W	X	Y	Z
W	W	W	W	W	W	W	W	W
X	W	X	W	X	W	X	W	X
Y	W	W	Y	Y	W	W	Y	Y
Z	W	X	Y	Z	W	X	Y	Z

- 2.2.4** If the letter forming the second character of the code for each of the dangerous goods is the same, then that letter will automatically form the second character of the EAC for the multi-load.
- 2.2.5** If, however, the letter forming the second character of the code for each of the dangerous goods is different, then one of those letters shall be selected along the top of the horizontal line) and then a second letter shall be selected down the far left-hand column, i.e. the two bold sections. The letter in the square where the appropriate column and row meet is the ‘resultant letter’ for those two substances. If there are only two dangerous goods to be carried in the multi-load, then that resultant letter is the letter forming the second character of the EAC for that multi-load.
- 2.2.6** If there are more than two dangerous goods to be carried in the multi-load, then use the ‘resultant letter’ obtained in paragraph 2.2.5 along the top horizontal line as above and select another letter down the far left-hand column as above. The letter in the square where the appropriate column and row meet is the new ‘resultant letter’. If there are no more dangerous goods to be carried in the multi-load, then that ‘resultant letter’ is the letter forming the second character of the code. If there are any further dangerous goods to be carried then this procedure must be repeated until all the other letters have been used.

Letter ‘E’

- 2.2.7** The letter ‘E’ shall be included as the third character in the multi-load emergency action code if it occurs in the EAC of any of the dangerous goods to be carried. If the letter ‘E’ does not occur in any of the EACs of the dangerous goods to be carried, the EAC shall be just a two character code determined from paragraphs 2.2.2 to 2.2.6 above.

Example:

- 2.2.8** The following is an example of how to calculate the emergency action code for a multi-load.

There are three substances to be carried as a multi-load, having emergency action codes of 3Y, 2S and 4WE.

1st Character (number)

The first character of the EAC for each of the three substances is 3, 2 and 4. The highest number must be taken as the first character of the code for the multi-load and therefore the first character shall be **4**.

2nd Character (letter)

The second character for the EAC for each of the three substances is Y, S and W. Taking the Y along the top row of the chart and the S along the left hand column, the intersection is at Y and therefore the character for the first two substances would be Y. This resultant character (Y) is then taken along the top row and the character for the third substance (W) is taken along the left hand column. The intersection point is now W. The second character of the code for the three substances shall therefore be **W**.

Letter 'E'

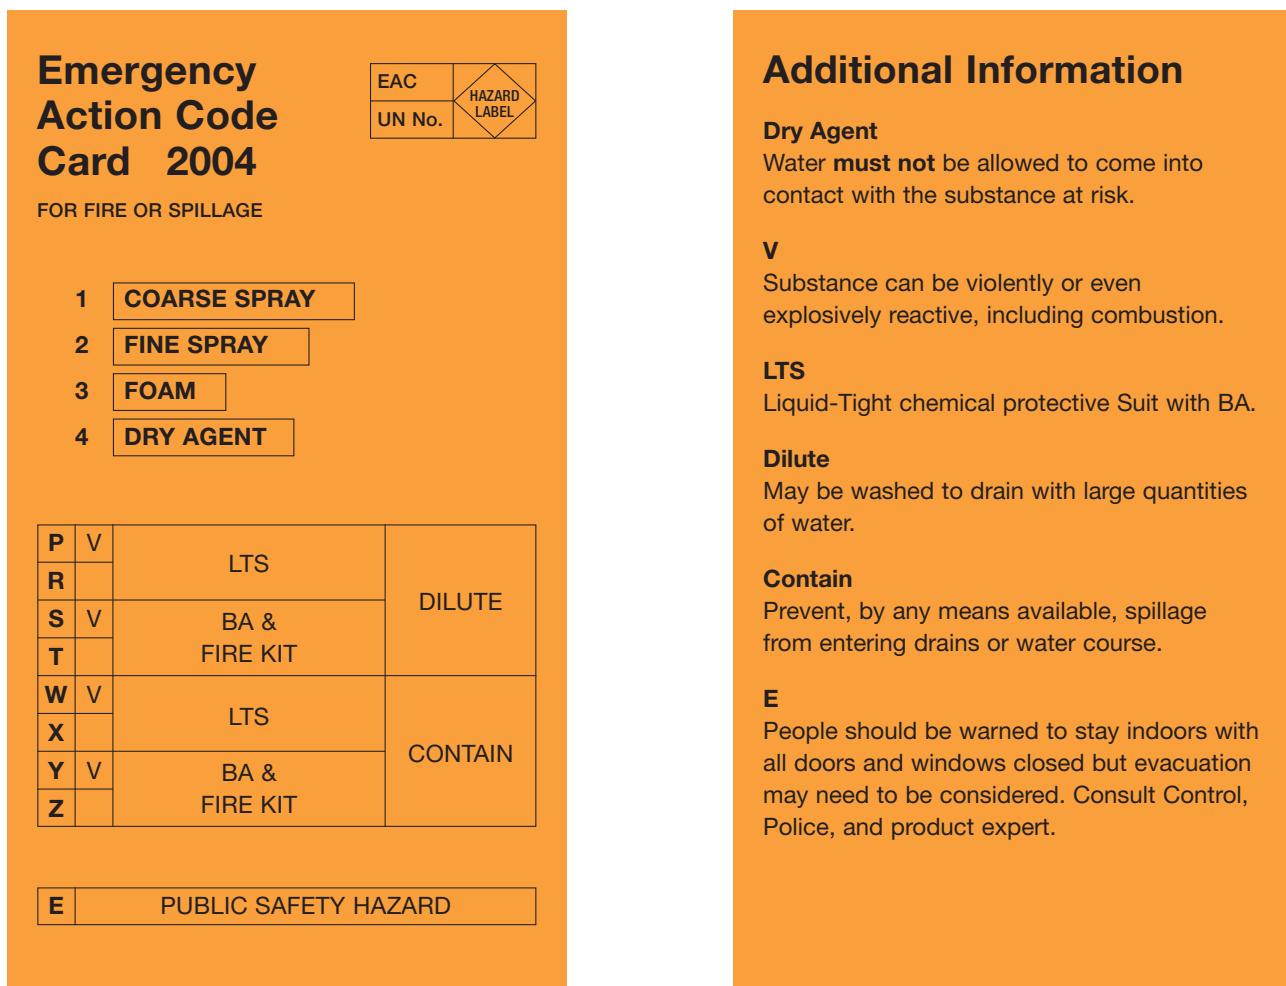

The third substance has an 'E' as a third character and therefore the multi-load shall also have an '**E**'.

The resultant emergency action code for the three substances carried as a multi-load shall therefore be **4WE**.

Section 3 – Application of Emergency Action Codes for the Emergency Services

3.1 Interpretation of Codes

- 3.1.1** The interpretation of an emergency action code is determined using Emergency Action Code pocket cards, the latest version of which is shown below.

Note: Emergency Action Code Cards are available from TSO
(ISBN 0 11 341295 9)

Extinguishing Media

- 3.1.2** The firefighting extinguishing medium is determined by reference to the first character of the EAC as follows:
- 1 denotes **coarse water spray**
 - 2 denotes **fine water spray**
 - 3 denotes **normal foam** i.e. protein based foam that is not alcohol resistant
 - 4 denotes dry **agent** – water **MUST NOT** be allowed to come into contact with substance

- 3.1.3** •2 and •3, which sometimes appear in the List, are not displayed on the vehicle plates or on the Emergency Action Code Cards and will only be shown as 2 and 3 respectively. This information can therefore only be obtained by reference to this document or another appropriate source, e.g. fire control. •2 denotes **alcohol resistant foam** but, if not available, fine water spray can be used. •3 denotes **alcohol resistant foam** but, if not available, normal foam can be used.

Note: Any higher number than the one shown can be used but a lower number must not be used.

Personal Protection

- 3.1.4** Where the second character of the EAC is S, T, Y or Z normal firefighting clothing is appropriate, i.e. self-contained open circuit positive pressure compressed air breathing apparatus conforming to BS EN 137 worn in combination with fire kit conforming to BS EN 469, firefighters' gloves conforming to BS EN 659 and firefighters' boots conforming to Home Office Specification A29 (rubber boots) or A30 (leather boots).

Note: Boots conforming to Home Office Specification A30 (leather boots) may not provide adequate chemical resistance and therefore caution should be exercised in the use of these boots.

- 3.1.5** Where the second character of the EAC is P, R, W or X liquid-tight chemical protective clothing conforming to BS 8428, in combination with breathing apparatus specified in paragraph 3.1.4, shall be used.

Violent Reaction

- 3.1.6** Where the second character of the EAC is a P, S, W or Y there is a danger that the substance can be violently or explosively reactive. This danger may be present due to one of the following:
- Violent or explosive decomposition of the material involved, including ignition or friction.

- The ignition of a flammable gas or vapour cloud (this danger exists for all flammable gases and flammable liquids with a flash point below 60°C).
- The rapid acceleration of combustion due to the involvement of an oxidiser.
- A reaction with water which is itself violent, and may also evolve flammable gases.

3.1.7 The actual danger present can be determined from the vehicle placards or by reference to the United Nations Class in this document or another appropriate source, e.g. fire control.

Contain/Dilute

3.1.8 Where the second character of an EAC is W, X, Y or Z spillages, contaminated fire and decontamination run-off should be prevented from entering drains and surface and groundwaters. Where the second character of the code is P, R, S or T and there is an immediate threat to people, spillages and decontamination run-off may be washed to drains with large quantities of water. In such cases due care must be exercised to avoid unnecessary pollution of surface and groundwaters and wherever possible control measures should be employed, for example the sealing of drains. More detailed information is contained in the Fire & Rescue Service Manual – Environmental Protection.

Note 1: It should be noted that pollution offences within environmental legislation apply equally to the Fire & Rescue Service as to other organisations.

Note 2: In recognition of the practical difficulties at incidents, the liaison between the environment agencies and the Fire and Rescue Service has been formalised. These are in the form of a Protocol in England and Wales and in Scotland and Northern Ireland that set out the roles and responsibilities of both parties together with the arrangements that should be followed when dealing with incidents where pollution may occur. These arrangements are detailed in the Fire & Rescue Service Manual – Environmental Protection.

Note 3: Ideally most spillages/run off and decontamination run-off should be contained. However, environment agencies accept that life saving will take precedence over environmental protection activities. Nevertheless, all steps that are reasonably practicable should be taken to contain contaminants and the Fire & Rescue Service should always inform the environment Agencies as soon as possible so that appropriate advice can be given. Specific information on the legal position of fire & rescue services at incidents in these circumstances can be found in the Fire & Rescue Service Manual – Environmental Protection.

Note 4: Potentially polluting substances, even apparently harmless substances such as food and beverages, can cause serious problems if discharged into a water body: e.g. a spillage of a soft drink or beer above domestic quantities can

constitute a pollutant as it can lead to deoxygenation of the water. Firefighting foams are also a potential source of pollution and their entry into a drainage system and or ground and surface waters should be prevented whenever possible.

Note 5: Other helpful guidance on environmental issues is as follows:

- Working better together Protocol Series No 8 between English and Welsh Local Government Association and the Environment Agency on fire and rescue service issues, August 2006 –
http://www.environment-agency.gov.uk/commadata/acrobat/protocol8_1567970.pdf
(Many fire & rescue services have entered into formal ‘Local Working Arrangements with the Environment Agency, as encouraged in the above protocol)
- Health and Safety Executive’s Guidance Note EH70 “Control of fire-water run-off from COMAH sites to prevent environmental damage”.
- The Environment Agency Pollution Prevention Guidelines – PG 18 Managing Firewater and Major Spillages
- The Environment Agency Pollution Prevention Guidelines – PG 22 Dealing with spillages on Highways

The above Environment Agency Pollution Prevention Guidelines, together with other PPGs can be found at:

<http://www.environment-agency.gov.uk/business/444251/444731/ppg/?version=1&lang=e>

E “Public Safety Hazard”

- 3.1.9** An ‘E’ following the first two characters of an EAC indicates that there may be a public safety hazard outside the immediate area of the incident, and that the following actions should be considered:
- 3.1.10** People should be warned to stay indoors with all doors and windows closed, preferably in rooms upstairs and facing away from the incident. Ignition sources should be eliminated and any ventilation stopped.
- 3.1.11** Effects may spread beyond the immediate vicinity. All non-essential personnel should be instructed to move at least 250 metres away from the incident.
- 3.1.12** Police and Fire and Rescue Service incident commanders should consult each other and with a product expert, or with a source of product expertise.
- 3.1.13** The possible need for subsequent evacuation should be considered, **but it should be remembered that in most cases it will be safer to remain in a building than to evacuate.**

Situations where evacuation may be necessary include the following:

EXAMPLES	ASSESSMENT
1.i. Smoke from product fire which is allowed to burn out. (Often safest and least environmentally damaging option.)	1. Nuisance effects will last several hours. Smoke or gas concentrations in open air are unpleasant but short-term exposure is not likely to be dangerous.
1.ii. Small/low concentration long lasting toxic emission.	
2. A larger long lasting toxic gas emission which will be carried towards an inhabited area after a predicted wind change not due for at least two hours.	2. Area considered for evacuation will not be exposed to significant danger for at least an hour, preferably longer.
3. Evacuation of people from an isolated house in the country may be feasible, possibly using additional BA sets.	3. Downwind area is very sparsely populated and resources are available to protect people during their evacuation.
4.i. Righting a loaded road tanker or rail tank wagon, especially one carrying a liquefied gas.	4. Area considered for evacuation could be exposed to danger as a result of actions necessary to restore normality at a time determined by the recovery team.
4.ii. Recovering or clearing petrol from drains.	

Section 4 – Numerical List of Dangerous Goods

4.1 Explanation of headings in Numerical List

4.1.1 The headings provided in each column of this Section are defined below:

Column 1: United Nations (UN) Number

- 4.1.2 The identification number shown in the first column of the list is that allocated by the United Nations and contained in the “Recommendations on the Transport of Dangerous Goods Model Regulations (fourteenth revised edition)”. These entries can also be found in the Regulations Concerning the International Carriage of Dangerous Goods by Rail [RID](2007) and in the European Agreement Concerning the International Carriage Dangerous Goods by Road [ADR] (2007).
- 4.1.3 Certain United Nations numbers carry more than one entry, each having a differing EAC, e.g. UN 1866 and UN 1986. In these cases the substances are carried in differing forms whose properties pose different hazards and require separate EACs.
- 4.1.4 Many United Nations numbers carry the abbreviation ‘N.O.S’. This abbreviation denotes ‘Not Otherwise Specified’. These numbers are used for substances or articles which do not have a discrete entry in the list of UN numbers and represent the hazard or hazards the substance or article possesses, e.g. UN 2929 ‘Toxic Liquid, Flammable, Organic, N.O.S’.
- 4.1.5 The List in this Section is displayed in UN number order. If only the substance name is known, the UN number can be found by reference to the alphabetical list of substances in Section 5.

Column 2: Substance

- 4.1.6 The names of substances in the second column of the list are by ‘Proper Shipping Names’. Where more than one EAC is allocated to a single UN number, the allocation of EAC is identified by the packing group following the ‘Proper Shipping Name’.

4.1.7 The alphabetical list of substances in Section 5 indicate the appropriate UN number for that substance. Substances shown in **BOLD CAPITAL TYPE** in this list indicate the ‘Proper Shipping Name’. Normal type indicates an alternative name with the appropriate UN number under which the substance will appear in this Section.

Column 3: Emergency Action Code (EAC)

4.1.8 Emergency Action Codes (commonly known as Hazchem codes) are designed to be used by the emergency services in conjunction with Emergency Action Code Cards, which are intended to be carried by emergency service personnel.

The cards indicate the action that may be necessary (except additional personal protection (APP) and the use of alcohol resistant foam) during the first few minutes of an incident.

4.1.9 Column 4: Advice on Additional Personal Protection (APP)

These codes appear as A or B in the List.

Note: These codes do not appear on vehicle placards or on the Emergency Action Code Cards. Whenever an APP code is assigned to a substance, further information shall be sought from the appropriate authority who have access to this information, e.g. fire and rescue service control.

4.1.10 Code letter A: Indicates that fire kit as specified in paragraph 3.1.4 with gas-tight chemical protective clothing as specified in paragraph 4.1.11 should be worn. The fire kit is intended to protect against one or more of the following additional hazards which are indicated in the List by the appropriate character(s) in brackets, following the ‘A’, as shown below:

- (c) Liquefied gas with a boiling point below -20°C
- (fg) Flammable gas
- (fl) Flammable liquid
- (cf) Liquefied flammable gas with a boiling point below -20°C
- (h) The substance may be carried above 100°C
- (co) Oxidising gas with a boiling point below -20°C
- (!) The substance may have a particularly deleterious effect on chemical protective clothing

4.1.11 Code letter B: The chemical protective clothing should be gas-tight conforming to BS EN 943 part 2 in combination with the breathing apparatus specified in paragraph 3.1.4.

Column 5: Hazards

4.1.12 This is sub-divided to show the primary hazard of the substance, which determines the Class into which the substance is assigned, and, where appropriate, the subsidiary risks. The classifications identified are those adopted by the United Nations Committee of Experts on the Transport of Dangerous Goods and on the Globally Harmonised System of Classification and Labelling of Chemicals, and are as follows:

- Class 1** – Explosives (Note: not included in this document)
- Class 2.1** – Flammable gases
- Class 2.2** – Non-flammable, non-toxic gases
- Class 2.3** – Toxic gases
- Class 3** – Flammable liquids
- Class 4.1** – Flammable solids, self-reactive substances and solid desensitised explosives
- Class 4.2** – Substances liable to spontaneous combustion
- Class 4.3** – Substances which in contact with water emit flammable gases
- Class 5.1** – Oxidising substances
- Class 5.2** – Organic peroxides
- Class 6.1** – Toxic substances
- Class 6.2** – Infectious substances
- Class 7** – Radioactive material
- Class 8** – Corrosive substances
- Class 9** – Miscellaneous dangerous substances and articles

Note: In this column the number following a decimal point always indicates a sub-division of a class.

Column 6: Hazard Identification Number (HIN)

4.1.13 The HIN consists of two or three figures. In general, the figures indicate the following hazards:

- 2** Emissions of gas due to pressure or to chemical reaction
- 3** Flammability of liquids (vapours) and gases or self-heating liquids
- 4** Flammability of solids or self-heating solids
- 5** Oxidizing (fire-intensifying) effect
- 6** Toxicity (or risk of infection)
- 7** Radioactivity
- 8** Corrosivity
- 9** Risk of spontaneous, violent reaction

Note: Spontaneous violent reaction within the meaning of figure 9 includes the possibility of the risk of explosion, disintegration and polymerization reaction with the release of considerable heat or flammable and/or toxic gases.

4.1.14 Doubling of a figure indicates an intensification of that particular hazard.

- 4.1.15** Where the hazard associated with a substance can be adequately indicated by a single figure, this is followed by zero.
- 4.1.16** The following combinations of figures have a special meaning: 22, 323, 333, 362, 382, 423, 44, 446, 462, 482, 539, 606, 623, 642, 823, 842 and 90. See below.
- 4.1.17** If the letter 'X' prefixes a hazard identification number, this indicates that the substance will react dangerously with water. For these substances, water may only be used with the approval of experts.
- 4.1.18** The hazard identification numbers have the following meanings:
- 20 Asphyxiant gas or gas with no subsidiary risk
 - 22 Refrigerated liquefied gas, Asphyxiant
 - 223 Refrigerated liquefied gas, flammable
 - 225 Refrigerated liquefied gas, oxidising (fire intensifying)
 - 23 Flammable gas
 - 238 Gas, flammable corrosive
 - 239 Flammable gas, which can spontaneously lead to violent reaction
 - 25 Oxidising (fire-intensifying) gas
 - 26 Toxic gas
 - 263 Toxic gas, flammable
 - 265 Toxic gas, oxidising (fire-intensifying)
 - 268 Toxic gas, corrosive
 - 28 Gas, corrosive
 - 285 Gas, corrosive, oxidizing
 - 30 Flammable liquid (flash-point between 23°C and 60°C inclusive) or flammable liquid or solid in the molten state with a flash point above 60°C, heated to a temperature equal to or above its flash point, or self-heating liquid
 - 323 Flammable liquid which reacts with water, emitting flammable gases
 - X323 Flammable liquid which reacts dangerously with water, emitting flammable gases*
 - 33 Highly flammable liquid (flash-point below 23°C)
 - 333 Pyrophoric liquid
 - X333 Pyrophoric liquid, which reacts dangerously with water*
 - 336 Highly flammable liquid, toxic
 - 338 Highly flammable liquid, corrosive
 - X338 Highly flammable liquid, corrosive, which reacts dangerously with water*
 - 339 Highly flammable liquid which can spontaneously lead to violent reaction
 - 36 Flammable liquid (flash-point between 23°C and 60°C inclusive), slightly toxic or self-heating liquid toxic
 - 362 Flammable liquid, toxic, which reacts with water, emitting flammable gases
 - X362 Flammable liquid, toxic, which reacts dangerously with water, emitting flammable gases*

* Water not to be used except by approval of experts

- 368 Flammable liquid, toxic, corrosive
- 38 Flammable liquid (flash-point between 23°C and 60°C inclusive), slightly corrosive or self-heating liquid, corrosive
- 382 Flammable liquid, corrosive, which reacts with water, emitting flammable gases
- X382 Flammable liquid, corrosive, which reacts dangerously with water, emitting flammable gases*
- 39 Flammable liquid, which can spontaneously lead to violent reaction
- 40 Flammable solid, or self-reactive substance, or self-heating substance
- 423 Solid which reacts with water, emitting flammable gases
- X423 Flammable solid which reacts dangerously with water, emitting flammable gases*
- 43 Spontaneously flammable (Pyrophoric) solid
- 44 Flammable solid, in the molten state at an elevated temperature
- 446 Flammable solid, toxic in the molten state, at an elevated temperature
- 46 Flammable or self-heating solid, toxic
- 462 Toxic solid which reacts with water, emitting flammable gases
- X462 Solid which reacts dangerously with water, emitting toxic gases*
- 48 Flammable or self-heating solid, corrosive
- 482 Corrosive solid which reacts with water, emitting corrosive gases
- X482 Solid which reacts dangerously with water, emitting corrosive gases*
- 50 Oxidising (fire-intensifying) substance
- 539 Flammable organic peroxide
- 55 Strongly oxidising (fire-intensifying) substance
- 556 Strongly oxidising (fire-intensifying) substance, toxic
- 558 Strongly oxidising (fire-intensifying) substance, corrosive
- 559 Strongly oxidising (fire-intensifying) substance, which can spontaneously lead to violent reaction
- 56 Oxidising substance (fire-intensifying), toxic
- 568 Oxidising substance (fire-intensifying), toxic, corrosive
- 58 Oxidising substance (fire-intensifying), corrosive
- 59 Oxidising substance (fire-intensifying) which can spontaneously lead to violent reaction
- 60 Toxic or slightly toxic substance
- 606 Infectious substance
- 623 Toxic liquid, which reacts with water, emitting flammable gases
- 63 Toxic substance, flammable (flash-point between 23°C and 60°C inclusive)
- 638 Toxic substance, flammable (flash-point between 23°C and 60°C inclusive), corrosive
- 639 Toxic substance, flammable (flash-point not above 60°C inclusive), which can spontaneously lead to violent reaction
- 64 Toxic solid, flammable or self-heating
- 642 Toxic solid, which reacts with water, emitting flammable gases
- 65 Toxic substance, oxidising (fire-intensifying)
- 66 Highly toxic substance

* Water not to be used except by approval of experts

- 663 Highly toxic substance, flammable (flash-point not above 60°C inclusive)
- 664 Highly Toxic substance, flammable or self-heating
- 665 Highly toxic substance, oxidising (fire-intensifying)
- 668 Highly toxic substance, corrosive
- 669 Highly toxic substance which can spontaneously lead to a violent reaction
- 68 Toxic substance, corrosive
- 69 Toxic or slightly toxic substance, which can spontaneously lead to violent reaction
- 70 Radioactive material
- 78 Radioactive material, corrosive
- 80 Corrosive or slightly corrosive substance
- X80 Corrosive or slightly corrosive substance, which reacts dangerously with water*
- 823 Corrosive liquid which reacts with water, emitting flammable gases
- 83 Corrosive or slightly corrosive substance, flammable (flash-point between 23°C and 60°C inclusive)
- X83 Corrosive or slightly corrosive substance, flammable (flash-point between 23°C and 60°C inclusive), which reacts dangerously with water*
- 839 Corrosive or slightly corrosive substance, flammable (flash-point between 23°C and 60°C inclusive), which can spontaneously lead to violent reaction
- X839 Corrosive or slightly corrosive substance, flammable (flash-point between 23°C and 60°C inclusive), which can spontaneously lead to violent reaction and which reacts dangerously with water*
- 84 Corrosive solid, flammable or self-heating
- 842 Corrosive solid which reacts with water, emitting flammable gases
- 85 Corrosive or slightly corrosive substance, oxidising (fire-intensifying)
- 856 Corrosive or slightly corrosive substance, oxidising (fire-intensifying) and toxic
- 86 Corrosive or slightly corrosive substance, toxic
- 88 Highly corrosive substance
- X88 Highly corrosive substance, which reacts dangerously with water*
- 883 Highly corrosive substance, flammable (flash-point between 23°C and 60°C inclusive)
- 884 Highly corrosive solid, flammable or self-heating
- 885 Highly corrosive substance, oxidising (fire-intensifying)
- 886 Highly corrosive substance, toxic
- X886 Highly corrosive substance, toxic which reacts dangerously with water*
- 89 Corrosive or slightly corrosive substance, which can spontaneously lead to violent reaction
- 90 Environmentally hazardous substance; miscellaneous dangerous substances
- 99 Miscellaneous dangerous substance carried at an elevated temperature

* Water not to be used except by approval of experts

List of Dangerous Goods

UN Nº	Substance	EAC	APP	Hazards		HIN
				Class	Sub Risks	
1001	ACETYLENE, DISSOLVED	2SE		2.1		239
1002	AIR, COMPRESSED	2T		2.2		20
